DialoQ®

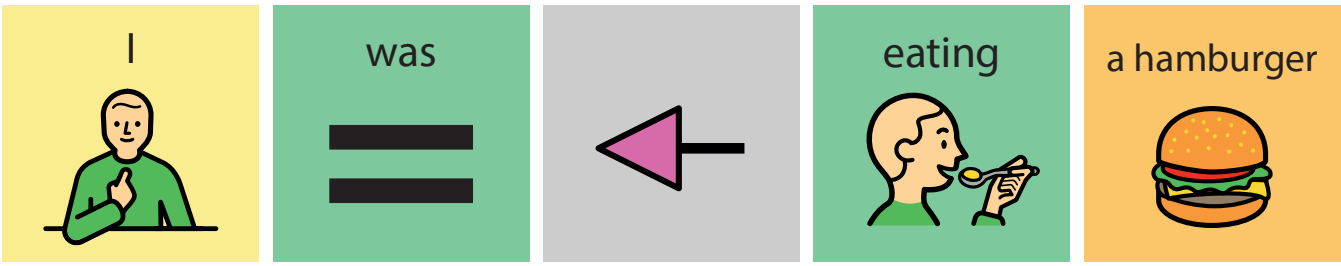
We Talk Together

DialoQ® Talk

Unique User-Friendly Features

DialoQ Talk is a symbol- and text-based communication software for Android and Windows devices, designed to assist individuals with language disabilities, such as aphasia or stroke, to communicate easily and effectively.

DialoQ Talk uses AI-powered Smart Grammar to automatically find the correct word forms, reducing the need for multiple buttons with the same symbol on a single communication page.



With the user input 'I' + 'be' + '<past>' + 'eat' + 'hamburger', the Smart Grammar generates the grammatically correct sentence 'I was eating a hamburger'.

Key features:

- AI-powered Smart Grammar – automatically selects the correct word forms
- Easy to use and edit
- Supports both free-form and grid-based communication boards
- Unique camera, microphone, drawing, and messaging features
- Support for a weekly calendar
- Environmental control support
- Downloadable content from AAC professionals
- Kiosk mode (Android) that restricts usage to communication only
- Eye tracking support on Alea IntelliGaze, EyeOn Elite, EyeOn Air, and Skyle
- For Android and Windows devices
- Print support for printable symbols
