Mercury 13 Pro 9

The Mercury 13 Pro 9 is an advanced low-vision computer system designed to provide powerful accessibility features for users with visual impairments.

- Large 13-inch HD touchscreen display for clear visuals
- High-performance processor for smooth operation
- Advanced magnification and contrast adjustments
- OCR technology for text-to-speech reading assistance
- Customisable accessibility settings for personalized use
- Ideal for work, education, and daily tasks

Our Product

Magnibot 2

The Magnibot 2 is a state-of-the-art robotic, motorized, wireless camera designed to provide unparalleled accessibility and magnification for users with low vision. Its innovative design allows for easy maneuverability and flexible positioning, making it an essential tool for reading, writing, and other detailed tasks.

- Motorized movement for adjustable positioning
- Wireless connectivity for seamless integration with devices
- High-definition camera for crisp, clear magnification
- Auto-focus and zoom capabilities for enhanced precision
- Ideal for reading, crafting, and technical work
- Compact and lightweight design for portability

Bluetooth Large Print Keyboard

The Bluetooth Large Print Keyboard is designed for individuals with low vision who need a comfortable and efficient typing experience. Featuring high-contrast, large print keys, this keyboard is perfect for improving readability and reducing eye strain.

- Wireless Bluetooth connectivity for seamless use with multiple devices
- Large, bold letters for enhanced visibility
- Ergonomic design for comfortable typing
- Compatible with Windows, macOS, iOS, and Android devices
- Durable and lightweight construction

ReadDesk Camera

The ReadDesk Camera is a compact, lightweight, and user-friendly device designed to magnify and read printed materials aloud. It offers an intuitive way for individuals with visual impairments to access printed content effortlessly.

- High-definition camera for crisp, clear magnification
- Real-time text-to-speech conversion for hands-free reading
- Adjustable magnification and contrast settings
- Portable and lightweight for easy transport
- USB connectivity for integration with computers
- Ideal for reading books, newspapers, and other printed materials

Bluetooth Large Print Keyboard

Mercury Vision

The Mercury Vision is a powerful wearable magnifier with speech functionality, designed to assist individuals with low vision in reading, recognizing objects, and navigating their surroundings with greater ease.

- High-definition magnification for crystal-clear visuals
- Optical Character Recognition (OCR) for text-to-speech functionality
- Adjustable zoom levels for customized viewing
- Lightweight and comfortable design for all-day wear
- Hands-free operation for enhanced convenience
- Ideal for reading, shopping, and recognizing faces or objects
